Carbon Removal
FY2025

Project: Agreena Carbon Project

24
tonnes
CO₂e

2023

Denmark

It is hereby certified that Swedavia AB has carbon offset 24 tonnes of carbon dioxide equivalents, for Visby Airport.

The Agreena Carbon Project is a soil carbon programme supporting European farmers in transitioning from conventional to regenerative agricultural practices. By reducing tillage, introducing cover crops, and improving residue management, participating farmers actively sequester carbon in the soil while restoring degraded farmland across Europe. The project operates across ten countries and covers more than 4.5 million hectares of arable land.

Other positive aspects

Improved water quality through reduced nitrate leaching, increased biodiversity above and below ground, and stronger long-term food security for European agriculture.
