Project: Yarra Yarra Biodiversity Corridor

**78 tonnes
CO₂e**

2020

Australia

It is hereby certified that Swedavia AB has carbon offset 78 tonnes of carbon dioxide equivalents, for Malmö Airport.

The Yarra Yarra Biodiversity Corridor is a reforestation project that simultaneously provides environmental, economic, and social benefits. Mixed tree species that are native to the region are grown on degraded farmland in southwestern Australia. Re-vegetating the landscape with native trees and shrubs encourages wildlife to return while sequestering carbon from the atmosphere. The project began in 2008, and since then, more than 30 million mixed native species (trees and shrubs) have been planted over 14,000 hectares.

Other positive aspects

Increased biodiversity, soil quality, and water quality.
